Artistic performance with the worlds brightest moving image projector

The lightmotiv-projector enlarges the liquid content of a shined-through petri dish to sizes up to 100 meters (over 300 ft) in diameter.

A lightmotiv artist influences the giant projection by adding effect liquids and by rotating the petri dish.

The multi coloured images emerge in a constant flow because of the structuring processes of the laws of nature. lightmotiv-images have an organic quality. Therefore lightmotiv can be used for performances as well as a dynamic room decoration element.

In the age of digital reproduction lightmotiv offers the chance of consciously experiencing a unique moment. In the beauty of natural forms lies the analogue antipole to the digitalized world. The fascinating images lead the beholder to contemplation and a view on his inner behavior. The character of a lightmotiv projection can be described as "liquid fireworks". It's an enrichment for wellness-, marketing-, art-, and music-events.
