Fog Projections

Projections on fog are incredibly fascinating.

Through the relative "thickness" and the movement of the fog the projected videos appear to be completely unforeseeable and exciting.

the**NightLab** has long-term experience with this complicated projection surface.

We are happy to use our special know-how to create a very special experience for you and your guests.

Basically we differentiate into two types of fog projection:

1. The FogScreen

The FogScreen creates a projection surface of 2,50 x 2,20 Meters. The fog is vaporized ultra fine.

The FogScreen is a projection surface where people can walk through. This product spreads a mystic fascination which remains in the memory of everybody who experienced it. the**NightLab** has long-term experience with projections on the FogScreen and offers the FogScreen with the partner company Flash Art as a projection package.

2. Atomised Spray

Atomised spray projection screens are variable in size. The installation on the pictures shows a size of 15 x 7 meters.
